$$V = \frac{W}{2}$$

more annotation  
in here

green

"The coloured states are numbered starting at zero" makes no sense because the edges have colour names, and these represent transitions.

$$(b) \quad \overline{A+B} = \overline{A} \cdot \overline{B}$$

$$A = A(B+\overline{B})$$

I'll edit/annotate in this box electronically

$$\oint V dv = 0$$

kind of makes it  
a bit simple.

because I forgot something, oops.

(c) 

$$\oint_V \psi_r dv = \int_0^h \int_0^d \int_0^w \psi(x, y, z) dx dy dz$$

$$\psi(x, y, z) = x + 2y - z^2$$

The diagram illustrates the Mark and Moderate processes. On the left, a vertical column of 15 red-outlined boxes is labeled 'Sub-total'. The 'Mark' process (red) starts with a 'Mark' button, leading to a red-outlined box with a red 'X' and a sad face, then to a red-outlined 'section' box. The 'Moderate' process (green) starts with a 'Moderate' button, leading to a green-outlined box with a green checkmark and a sad face, then to a green-outlined 'section' box. Both 'section' boxes have a 'Q' icon, a 'number' field, and a 'mark awarded' field. The 'Mark' process leads to a red-outlined 'Mark' button with a green checkmark. The 'Moderate' process leads to a green-outlined 'Comment/query?' box, which then leads to a green-outlined 'Fixed' button with a green checkmark or a green-outlined 'Not sure' button with a question mark.
