

The diagram illustrates the flow of data from a 'Mark' input to a 'Sub-total' output, passing through two 'section' blocks. The flow starts at a 'Mark' input, goes through a 'section' block (containing 'Q number' and 'mark awarded' fields), then through another 'section' block, and finally to a 'Sub-total' output. A feedback loop is shown from the 'Mark' input to the 'Sub-total' output.
