

(9)

"The coloured states are numbered starting at zero" makes no sense because the edges have colour names, and these represent transitions.

$$(b) \quad \overline{A+B} = \overline{A} \cdot \overline{B}$$

$$A = A(B + \overline{B})$$

I'll edit/annotate in this box electronically

$$\oint V dv = 0$$

kind of makes it
a bit simple.

because I forgot something, oops.

(c)  $\oint_V \Psi_v dv = \int_0^h \int_0^d \int_0^w \Psi(x,y,z) dx dy dz$

The diagram illustrates the flow of a question through a system. It starts with a 'Mark' header at the top. A line from this header splits: one branch goes to a 'Sub-total' column on the left, which contains a vertical stack of 15 empty boxes; the other branch goes to a question card. The question card is a light blue rectangle with a rounded top-left corner. It contains a large 'Q' icon, a 'section' label with an adjacent box, a 'number' label with two adjacent boxes, and a 'mark awarded' label with two adjacent boxes. Below the question card is another identical question card. A line from the bottom of the second question card leads to a 'Mark' footer at the bottom, which contains a green circle with a white checkmark and a 'Mark' label. A small icon of a document with a red 'x' and a sad face is also shown near the top right of the flow.
